

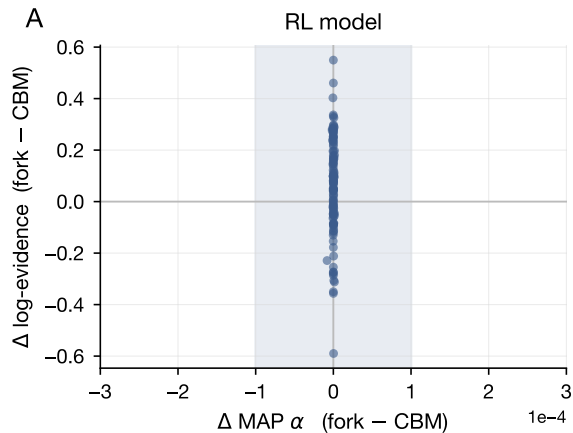

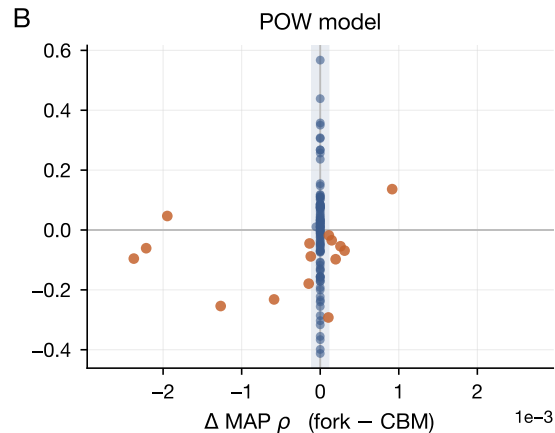

Figure 4 · Gauss-Newton deviation: fork vs original CBM

One point per subject. Points stacked on $\Delta\text{MAP} = 0$ mean the change moved the evidence, not the optimum. Shaded band = ± 0.0001 convergence tolerance; any subject outside it is drawn in orange.

MAP differs: 0 / 120 fits
evidence differs: 120 / 120 fits
median ΔLME : +0.077 nats

MAP differs: 15 / 119 fits
evidence differs: 119 / 119 fits
median ΔLME : -0.003 nats
